• **NOTE REGARDING GLASS GLOBES AND REFRACTORS** — All Hazlux fixture assemblies shown in this Buyers Guide as UL Listed or CSA Certified for Marine applications are suitable for hosedown when fixture is off and glass has been allowed to cool. Tempered glass globes and refractors have better thermal shock resistance properties than non-tempered globes and refractors and should be considered whenever fixtures are subject to being splashed with significantly cooler liquids while illuminated (hot). Consult factory for more information.

Hazardous Locations

D

Hazlux®

HAZARDOUS LOCATION—An area where the possibility of explosion and fire is created by the presence of flammable gases, vapors, dust, fibers or flyings.

CLASS I-Gas

CLASS I (NEC-500-5) — Those areas in which flammable gases or vapors may be present in the air in sufficient quantities to be explosive or ignitable.

Typical Class I Locations:

- Petroleum refineries, and gasoline storage and dispensing areas.
- Industrial firms that use flammable liquids in dip tanks for parts cleaning or other operations.
- Petrochemical companies that manufacture chemicals from gas and oil.
- Dry cleaning plants where vapors from cleaning fluids can be present.
- Companies that have spraying areas where they coat products with paint or plastics.
- Aircraft hangars and fuel serving areas.
- Utility gas plants and operations involving storage and handling of liquified petroleum gas or natural gas.

CLASS II-Dust

CLASS II (NEC-500-6) — Those areas made hazardous by the presence of combustible dust.

Typical Class II Locations:

- Grain elevators, flour and feed mills.
- Plants that manufacture, use or store magnesium or aluminum powders.
- Plants that have chemical or metallurgical processes: producers of plastics, medicines and fireworks, etc.
- Producers of starch or candies.
- Spice-grinding plants, sugar plants and cocoa plants.
- Coal preparation plants and other carbon handling or processing areas.

CLASS III-Fibers

CLASS III (NEC-500-7) — Those areas in which there are easily ignitable fibers or flyings present, due to type of material being handled, stored, or processed.

Typical Class III Locations:

- Textile mills, cotton gins, cotton seed mills and flax processing plants.
- Any plant that shapes, pulverizes or cuts wood and creates sawdust or flyings.

NOTE: Fibers and flyings are not likely to be suspended in the air, but can collect around machinery or on lighting fixtures and where heat, a spark or hot metal can ignite them.

DIVISION 1-Normally Hazardous

DIVISION 1 — Hazardous gases or dusts are present under normal operation conditions or during frequent repair and maintenance activity.

GROUPS A-B-C-D

GROUPS (NEC-500-2 & 502-1) — The gases and vapors of Class I locations are broken into four groups by the code A, B, C and D. These materials are grouped according to: the ignition temperature of the substance, its explosion pressure and other flammable characteristics.

GROUPS E-F-G

CLASS II—dust locations-groups E, F and G. These groups are classified according to the ignition temperature and the conductivity of the hazardous substance.

DIVISION 2-Not Normally Hazardous

DIVISION 2 — Hazardous gases or dusts are not present under normal operating conditions.

ARTICLES 500 Through 505 (1996 NEC)—Explains in detail the requirements for the installation of wiring or electrical equipment in hazardous locations. These articles along with other applicable regulations; local governing inspection authorities, insurance representatives, and qualified engineering/technical assistance should be your guides to the installation of wiring or electrical equipment in any hazardous or potentially hazardous location.

Note: These are simplified definitions - complete data is available in the referenced 1996 NEC.

Simply order a fixture and a top hat from those listed on the back. These select Hazlux® fixtures will come pre-wired, with lamp installed, with no added cost to you!

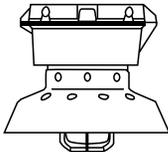

If you need an immediate solution for a smaller project, or you need help getting a larger project "started", contact your Thomas & Betts Representative for more details about our Rapid Service Program for Hazlux® Lighting Fixtures.

Put down the calendar and give us a call. We're ready, so you won't have to wait!

Hazlux 2 Options

The options listed below plus many more are available with Hazlux 2 fixtures. Refer to the "Catalog Numbering System" section and "Ordering Information" pages of this catalog for ordering details.

- Instant Restart (50-150W HPS)**
 Allows high pressure sodium lamp to be immediately restarted after a momentary power outage.
- Auxiliary Quartz Circuit - All**
 Fixture provided with 120 volt 100 watt quartz lamp circuit. Quartz lamp will operate during HID warm-up period, or when HID lamp cools down before restarting.
- NEMA Lamp Wattage Decal - All**
 Adhesive backed lamp wattage decal is provided on ballast housing exterior to clearly indicate wattage for relamping and maintenance.
- Auto Shutoff Option (50-150W HPS)**
 Auto shutoff device prevents starter failure by disabling the starter circuit in case of cycling or defective HPS lamp. (Not for use with instant restart option.)
- 50 Hertz Ballasts (Most Hazlux 2 Fixtures)**
 50 hertz ballasts in a variety of voltages can be furnished for international voltage systems.
- Tuffskin® Coated Glass Globes (All Globes)**
 Tuffskin silicone coating contains glass particles in case of breakage; prevents glass from contaminating process areas.
- HazCote™ Custom Corrosion Resistant Coating (All)**
 Custom chemical coating provides even higher degree of corrosion protection for cast aluminum parts. For use in highly corrosive environments.
- Dual Arc Tube Lamps (HPS)**
 Provide standby/immediate restart capabilities.
- Stainless Steel Inserts (All)**
 Stainless steel inserts for guard screws and ballast housing closure screw eliminate possibility of galvanic corrosion between stainless steel screws and aluminum parts.
- UNIPAK® Packaging (All)**
 UNIPAK packaging means that fixtures are completely assembled — with lamp — and foamed in one carton. Saves labor, handling, storage, and reduces total installed cost per fixture. See UNIPAK section of this brochure.
- HazVertor® Adapter Ring**
 UL Listed adapter ring enables quick, easy, UL listed retrofit of Crouse-Hinds® VMV, LMV, and DMV series Champ® fixtures. See HazVertor section of this brochure.

UNIPAK® Packaging

Hazlux 2 fixtures ordered with the UNIPAK® packaging option will be completely assembled with lamp (and with mounting cover and/or reflector, if specified) and shipped in one carton. Each fixture assembly is foamed in place in the carton to insure zero transit damage. Receiving, handling, storing, identification, assembly, and component matching are all made easier by this common sense approach to manufacturing and shipping.

Use the Catalog Numbering codes (Position #11) to add UNIPAK® with lamp packaging to any make-to-order Hazlux 2 assembly, or refer to the table below to order the most commonly used Hazlux 2 UNIPAK® assemblies.

Benefits of UNIPAK® Packaging:

- ✓ Fewer cartons to receive.
- ✓ Fewer cartons to store.
- ✓ Reduced jobsite material handling costs
- ✓ Lower installation labor costs.
- ✓ No chance of Lamp/Ballast mismatch in field.
- ✓ No waiting around for fixtures.

Hazlux® Induction Lighting reduces the cost of expensive maintenance of industrial lighting in hazardous locations.

Here’s how you save maintenance costs with Hazlux® Induction Lighting:

- Eliminates the need for expensive HID options such as Quartz Auxiliary Lamps or Instant Restrike.
- Reduces risks to installers performing maintenance in hard-to-reach places.
- Reduces number of times necessary to de-energize entire circuit of lights for maintenance in hazardous locations.
- Increases efficiency by decreasing machine shutdown time.
- Lowers cost of expensive rental of scissor lifts or bucket trucks.

Now you can use the longest-life lamp available on the market.

In the typical process industry plant, reliable lighting is often required in hazardous, hard-to-reach places. Lamp replacement not only places employees at risk, but often requires the rental of expensive equipment such as scissors lifts.

With the introduction of Hazlux Induction Lighting Fixtures for hazardous areas (Class 1, Div. 2 Groups A, B, C, D) and non-hazardous areas, you can benefit from the longest lamp life available on the market. Hazlux® 3 HID lights are equipped with Philips® QL Induction lamps for the longest lamp life ever.

Features include:

- 60,000+ hour lamp life
- Reduced maintenance/re-lamp operations
- Instant On-Instant Restrike
- Automatic switch-off in case of failure
- Warm white light
- Exceptional energy efficiency
- -40°C to 40°C ambient operating range
- Retrofits into existing Hazlux® 3 applications
- Acceptable for use with infrared remote control equipment operating at 36kHz.
- RFI-approved for environments up to 1000 MHz (FCC part 18 reference luminaire)

UNIPAK® Packaging

Hazlux 3 fixtures ordered with the UNIPAK® packaging option will be completely assembled with lamp (and with mounting cover and/or reflector, if specified) and shipped in one carton. Each fixture assembly is foamed in place in the carton to insure zero transit damage. Receiving, handling, storing, identification, assembly, and component matching are all made easier by this common sense approach to manufacturing and shipping.

Use the Catalog Numbering codes (Position #11) to add UNIPAK® with lamp packaging to any make-to-order Hazlux 3 assembly, or refer to the table below to order the most commonly used Hazlux 3 UNIPAK® assemblies from our finished goods inventories!

Benefits of UNIPAK® Packaging:

- ✓ Fewer cartons to receive.
- ✓ Fewer cartons to store.
- ✓ Reduced jobsite material handling costs
