

Jeddah^{cables}
COMPANY[®]

A Company of Energyya Cables

Indoor Cables

Introduction

Building Wires are used for fixed indoor installations inside conduits and within walls.

Building Wires with multi-cores can be used to connect a power supply to large loads such as air conditioning systems. Examples include: copper conductors with PVC insulation (NYA) and copper with PVC insulation and nylon jacketing (THHN).

In this catalogue, we cover all technical aspects of Jeddah Cable Company Indoor Cables. We included design considerations such as type of insulation material, insulation thicknesses, sheath material, and sheath thicknesses. Cables electrical parameters such as conductor DC resistance and current ratings are included as well.

Jeddah Cable Company Indoor Cables are manufactured based on international standards such as IEC 60227, BS 6004, and UL 83. We are also capable of manufacturing according to client requirements and needs.

Standards

The indoor cables described in this catalogue are all standard types, and their performances has been proved in operation.

Construction and tests are in accordance with the recommendation of IEC publications where applicable, indoor cables in accordance to other standards (e.g. BS, VDE, NEMA) can be manufactured upon customer's request.

Variation in Production and Delivery Options

- The provided data is approximate and subject to manufacturing tolerance
- Delivery length tolerance is $\pm 5\%$
- Other product sizes are available upon customer's request

Jacket Marking

Standard embossed outer jacket marking consisting of:

1. Name of manufacturer
2. Type designation, size of conductor, rated voltage and standard
3. Continuous length marking every meter (if applicable)
4. Year of manufacture

Conductor

PVC Sheath

Conductor

PVC Sheath

Laying Information

Minimum Bending Radius During Installation

During laying, the bending radius should not be smaller than values given below.
The radius depends on the outer diameter (D_o) of the cable.

Cable for Fixed Wiring

Insulation	Conductor	Outer diameter (mm)	Min. Radius (mm)
PVC or (LSHF)	Copper (solid strand or flexible)	Up to 10 10 - 25 Above 25	3 D_o 4 D_o 6 D_o

Electrical Parameters Of The Cables

DC Resistance of Conductor

The Maximum DC resistance values of conductors at 20°C are as per “IEC 60228” standard.

DC resistance per unit length of the conductor at other conductor temperature θ is given by:

$$R = R_0 [1 + \alpha_{20^\circ\text{C}} (t - 20^\circ\text{C})]$$

Where:

R = DC resistance at temperature t °C Ω/km

R_0 = D.C resistance at temperature 20°C Ω/km (given in the relative tables for each type of (cable))

t = Conductor temperature °C

α_{20} = Temperature coefficient at 20°C 1/°C

For copper conductor $\alpha_{20^\circ\text{C}} = 0.00393$

Single Core

For indoor fixed installation in dry location

- Type : CU / PVC
 Standard : IEC 60227
 Nominal Voltage: 450/750 volt
 Conductor : Soft annealed solid or stranded copper wires
 Insulation : PVC compound rated 85°C (or LSHF)
 Packing : Plastic spools-coils or non returnable wood drums as per customer requirement

Conductor

PVC Insulation
